

The **NASSMC Briefing Service (NBS)** is a unique Internet-based information resource that provides brief, timely, crisply-formatted summaries of important STEM education issues addressed in the national press.

Started in 1999 with initial funding from the ExxonMobil Foundation and the National Security Agency, NBS is built on the belief that an informed populace can make better decisions. The NASSMC Briefing Service is designed to track important STEM education related stories in the national press and distribute information about them to subscribers via direct email and on the Web.

NASSMC constructed the NBS to sort the news into several categories, including:

- Assessment and Accountability
- Business Role in Education
- Content Standards
- Curriculum Materials
- Education Policy
- Opinion/Editorial

- Postsecondary Education
- Professional Development
- Public Understanding and Engagement
- School Staffing and Governance
- Studies and Reports
- Teacher Preparation (including recruitment and mentoring)

The NASSMC Briefing Service is the only STEM education related service of this kind in existence now.

Through the NBS you can receive daily, concise email summaries of major news stories related to STEM education. The service is highly selective, issuing at most three Briefs per working day. Subscription to the NASSMC Briefing Service is free. A living archive of NBS has been created at the NASSMC website to sample and find Briefs.

The NASSMC Briefing Service currently has 500 regular subscribers. Surveys indicate that as many as 25,000 receive Briefs either directly or as a result of redistribution by the original subscribers.
